"Our point, again, is that our biocentric conclusions that there is no death, no time, no space, and instead a single living entity, which precludes a stand-apart dead universe abiding separately from life and consciousness, is a science-based reality, but it's also the conclusion that anyone would arrive at on their own if they merely thought things through, or quietly contemplated what was going on inside their minds."

We delve into quantum theory, relativity and other theories to show that time and space don't exist, at least not as we commonly perceive them. Contrary to what we "know" with science (not to mention what we feel in our guts), "spooky action at a distance" is not only possible, it's quite common.

Biocentrism shocked the world with a radical rethinking of the nature of reality. But that was just the beginning. In Beyond Biocentrism, acclaimed biologist Robert Lanza, one of TIME Magazine's "100 Most Influential People in 2014," and leading astronomer Bob Berman, take the reader on an intellectual thrill-ride as they re-examine everything we thought we knew about life, death, the universe, and the nature of reality itself. The first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries. Science tells us with some precision that the universe is 26.8 percent dark matter, 68.3 percent dark energy, and only 4.9 percent ordinary matter, but must confess that it doesn't really know what dark matter is and knows even less about dark energy. Science is increasingly pointing toward an infinite universe but has no ability to explain what that really means. Concepts such as time, space, and even causality are increasingly being demonstrated as meaningless. All of

science is based on information passing through our consciousness but science hasn't the foggiest idea what consciousness is, and it can't explain the linkage between subatomic states and observation by conscious observers. Science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life. The biocentrism theory isn't a rejection of science. Quite the opposite. Biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness. By listening to what the science is telling us, it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe. This forces a fundamental rethinking of everything we thought we knew about life, death, and our place in the universe.

Robert Lanza is one of the most respected scientists in the world a US News and World Report cover story called him a genius and a renegade thinker, even likening him to Einstein. Lanza has teamed with Bob Berman, the most widely read astronomer in the world, to produce Biocentrism, a revolutionary new view of the universe. Every now and then a simple yet radical idea shakes the very foundations of knowledge. The startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world. For most humans of the 15th century, the notion of Earth as ball of rock was nonsense. The whole of Western, natural philosophy is undergoing a sea change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, toward doubt and uncertainty in the physical explanations of the universes

genesis and structure. Biocentrism completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around. In this paradigm, life is not an accidental byproduct of the laws of physics. Biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer. Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself. Biocentrism will shatter the readers ideas of life--time and space, and even death. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal. The 21st century is predicted to be the Century of Biology, a shift from the previous century dominated by physics. It seems fitting, then, to begin the century by turning the universe outside-in and unifying the foundations of science with a simple idea discovered by one of the leading life-scientists of our age. Biocentrism awakens in readers a new sense of possibility, and is full of so many shocking new perspectives that the reader will never see reality the same way again.

What if life isn't just a part of the universe . . . what if it determines the very structure of the universe itself? The theory that blew your mind in *Biocentrism and Beyond Biocentrism* is back, with brand-new research revealing the startling truth about our existence. What is consciousness? Why are we here? Where did it all come from—the laws of nature, the stars, the universe? Humans have been asking these questions forever, but science hasn't succeeded in providing many answers—until now. In *The Grand Biocentric*

Design, Robert Lanza, one of Time Magazine's "100 Most Influential People," is joined by theoretical physicist Matej Pavšic and astronomer Bob Berman to shed light on the big picture that has long eluded philosophers and scientists alike. This engaging, mind-stretching exposition of how the history of physics has led us to Biocentrism—the idea that life creates reality—takes readers on a step-by-step adventure into the great science breakthroughs of the past centuries, from Newton to the weirdness of quantum theory, culminating in recent revelations that will challenge everything you think you know about our role in the universe. This book offers the most complete explanation of the science behind Biocentrism to date, delving into the origins of the memorable principles introduced in previous books in this series, as well as introducing new principles that complete the theory. The authors dive deep into topics including consciousness, time, and the evidence that our observations—or even knowledge in our minds—can affect how physical objects behave. The Grand Biocentric Design is a one-of-a-kind, groundbreaking explanation of how the universe works, and an exploration of the science behind the astounding fact that time, space, and reality itself, all ultimately depend upon us.

Contributors such as Jimmy Carter, Jonathan Mann, Carl Sagan, Jonas Salk, Linus Pauling, and Robert Gallo examine health and disease on a global scale, from a perspective that encompasses the well-being of the whole of humanity. This enormous project offers a view of the planet's future through the eyes of dozens of the world's best and brightest minds.

From the speed of light to moving mountains—and everything in between—**ZOOM** explores how the universe and its objects move. If you sit as still as you can in a quiet room,

File Type PDF Beyond Biocentrism Rethinking Time Space Consciousness And The Illusion Of Death

you might be able to convince yourself that nothing is moving. But air currents are still wafting around you. Blood rushes through your veins. The atoms in your chair jiggle furiously. In fact, the planet you are sitting on is whizzing through space thirty-five times faster than the speed of sound. Natural motion dominates our lives and the intricate mechanics of the world around us. In ZOOM, Bob Berman explores how motion shapes every aspect of the universe, literally from the ground up. With an entertaining style and a gift for distilling the wondrous, Berman spans astronomy, geology, biology, meteorology, and the history of science, uncovering how clouds stay aloft, how the Earth's rotation curves a home run's flight, and why a mosquito's familiar whine resembles a telephone's dial tone. For readers who love to get smarter without realizing it, ZOOM bursts with science writing at its best.

The Simulation Hypothesis, by best-selling author, renowned MIT computer scientist and Silicon Valley video game designer Rizwan Virk, is the first serious book to explain one of the most daring and consequential theories of our time. Riz is the Executive Director of Play Labs @ MIT, a video game startup incubator at the MIT Game Lab. Drawing from research and concepts from computer science, artificial intelligence, video games, quantum physics, and referencing both speculative fiction and ancient eastern spiritual texts, Virk shows how all of these traditions come together to point to the idea that we may be inside a simulated reality like the Matrix. The Simulation Hypothesis is the idea that our physical reality, far from being a solid physical universe, is part of an increasingly sophisticated video game-like simulation, where we all have multiple lives, consisting of pixels with its own internal clock run by some giant Artificial Intelligence. Simulation theory explains some of the biggest

mysteries of quantum and relativistic physics, such as quantum indeterminacy, parallel universes, and the integral nature of the speed of light. Recently, the idea that we may be living in a giant video game has received a lot of attention: “ There ’ s a one in a billion chance we are not living in a simulation ” -Elon Musk “ I find it hard to argue we are not in a simulation. ” -Neil deGrasse Tyson “ We are living in computer generated reality. ” -Philip K. Dick Video game technology has developed from basic arcade and text adventures to MMORPGs. Video game designer Riz Virk shows how these games may continue to evolve in the future, including virtual reality, augmented reality, Artificial Intelligence, and quantum computing. This book shows how this evolution could lead us to the point of being able to develop all encompassing virtual worlds like the Oasis in Ready Player One, or the simulated reality in the Matrix. While the idea sounds like science fiction, many scientists, engineers, and professors have given the Simulation Hypothesis serious consideration. Futurist Ray Kurzweil has popularized the idea of downloading our consciousness into a silicon based device, which would mean we are just digital information after all. Some, like Oxford lecturer Nick Bostrom, goes further and thinks we may in fact be artificially intelligent consciousness inside such a simulation already! But the Simulation Hypothesis is not just a modern idea. Philosophers like Plato have been telling us that we live in a “ cave ” and can only see shadows of the real world. Mystics of all traditions have long contended that we are living in some kind of “ illusion “ and that there are other realities which we can access with our minds. While even Judeo-Christian traditions have this idea, Eastern traditions like Buddhism and Hinduism make this idea part of their core tradition — that we are inside a dream world (“ Maya ” or illusion, or Vishnu ’ s Dream), and we have “ multiple

lives "playing different characters when one dies, continuing to gain experience and "level up" after completing certain challenges. Sounds a lot like a video game! Whether you are a computer scientist, a fan of science fiction like the Matrix movies, a video game enthusiast, or a spiritual seeker, The Simulation Hypothesis touches on all these areas, and you will never look at the world the same way again!

The world of pure science by itself is fascinating enough to beat the best of science fiction in generating wonder and excitement. This non-fiction science book would be sure to set your pulse racing. Beyond a lucid explanation of modern physics concepts such as Relativity, and Quantum Physics, this book further traces the history of wonder and scientific thought, studies the philosophies of different cultures, and investigates the science working behind things such as meditation and near-death experience. Studying these different areas and aligning them into a single explanation, the book scientifically investigates the nature of reality, the features of consciousness, the secrets of existence beyond the body and explores an ideal way we should be living our life based on the available evidence from here and beyond.

The mind is holographic in nature, and exists outside of the body, distributed across the infinite sub-quantum infrastructure of the universe. And while it is one thing to simply make such a statement, this book will actually elucidate the underlying sub-quantum physics demonstrating how this is possible. Further, it will show how sub-quantum physics provides a rational framework which explains such so-called "paranormal" phenomena as Precognition, Psychometry, Telepathy, Reincarnation, Mediumship, Out-Of-Body Experience, The Akashic Records, and many more.

A classic book on the history of the USA's involvement with Afghanistan

Julie Bertuzzi, the wife of NHL player Todd Bertuzzi and Hockey Mom extraordinaire, presents us with twenty hilarious portraits of the Hockey Moms we know and love. The perfect gift book for all seasons. Straight-shooting, observant, and uproarious, Julie Bertuzzi's *Hockey Moms* is an irreverent look at the many kinds of moms you are sure to find in the ice rinks, on the road, and in the hotel bars at tournaments across this hockey-loving continent. While always applauding the dedication of moms who support their players -- at early morning practices and on long drives to and from tournaments, in the triumph of a big win and the heartache of a big loss -- Bertuzzi pokes fun at herself and her fellow Hockey Moms, and brings alive the many characters she has observed during her years of experience as a Hockey Mom herself. Whether it's Big Mouth Betty shrieking from the stands, the Drama Queen stirring up trouble in the bar after a tournament game, Team Manager Mom with her clipboard and team jacket, the Yodeler, or the Leaner, readers will recognize and delight in these familiar profiles. This is a quick, funny read and a must-have book for Hockey Moms, and those who love them, everywhere.
