DESIGN FACTORS Design and layout of an activated sludge plant for the treatment of municipal wastewater is based on the following design data: (a) wastewater flow (MGD) daily peak wastewater flow (1000 gal/hr) (b) average influent BOD (mg/1) (c) average influent suspended solids (mg/1) The basic data should also include any industrial waste and

## Basic Principles of Wastewater Treatment

Aerobic biological treatment (see Box) is performed in the presence of oxygen by aerobic microorganisms (principally bacteria) that metabolize the organic matter in the wastewater, thereby producing more microorganisms and inorganic end-products (principally CO<sub>2</sub>, NH<sub>3</sub>, and H<sub>2</sub>O). Several aerobic biological processes are used for secondary treatment differing primarily in the manner in which oxygen is supplied to the microorganisms and in the rate at which organisms metabolize the organic ...

Wastewater treatment is a process used to remove contaminants from wastewater or sewage and convert it into an effluent that can be returned to the water cycle with acceptable impact on the environment, or reused for various purposes (called water reclamation). The treatment process takes place in a wastewater treatment plant (WWTP), also referred to as a Water Resource Recovery Facility (WRRF ...

Biological Wastewater Treatment - an overview ...

Sewage treatment is the process of removing contaminants from municipal wastewater, containing mainly household sewage plus some industrial wastewater. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safe enough for release into the environment.
