This book covers the psychedelic ayahuasca tourism in Peru, with its facet-rich psychological, pharmacological, anthropological, and sociological aspects. The reader gets an interdisciplinary insight into the historical development and the current state of ayahuasca research. Findings from three empirical studies are presented, which the author has won in a 4-year field research: How do common standards develop in this particular form of psycho-spiritual tourism? Why are people from developed nations and urban centres heading to the Amazon to ingest the psychedelic beverage Ayahuasca? How do they experience such ceremonies and retreats? Which insights, personal meaning and effects do they gain and how do they integrate their experiences into the everyday life?

This book summarizes Ismael Apud's ethnographic research in the field of ayahuasca, conducted in Latin America and Catalonia over a period of 10 years. To analyze the variety of ayahuasca spiritual practices and beliefs, the author combines different approaches, including medical anthropology, cognitive science of religion, history of science, and religious studies. Ismael Apud is a psychologist and anthropologist from Uruguay, with a PhD in Anthropology at Universitat Rovira i Virgili.

The Ketamine Papers clarifies the issues and is an inspiring introduction to this powerful tool for healing and transformation--from its early use in the 1960s to its emerging role in the treatment of depression, suicidality, and other conditions. This comprehensive volume is the ideal introduction for patients and clinicians alike, and for anyone interested in the therapeutic and transformative healing power of this revolutionary medicine.

The story of Albert Hofmann's life and the parallel story of LSD highlighting his academic journey, his research at Sandoz and his open minded, thoughtful philosophies about his discovery.

'The psychedelic reader' collects the very best writing from the dawn of the psychedelic era. Luminaries such as Alan Watts, Timothy Leary, Sir Julian Huxley, and Ralph Metzner contribute insights on subjects as fascinating as 'Botanical Sources of New World Narcotics' and as controversial as 'The Treatment of Frigidity with LSD and Ritalin'. From precise dosage guidelines to ruminations on the poetry of Herman Hesse, this powerful anthology presents the entire psychedelic spectrum with both the seriousness and open-mindedness it requires.

Given the unacceptably high rates of suffering, disability and premature death experienced by people with treatment-resistant depression and the surprisingly low rates of problems arising from the use of ketamine to treat the disorder, this is a therapy that all patients and their doctors should be discussing. This book summarises the research that has been carried out into ketamine for the treatment of depression over the past 15 years and, most importantly, describes different ways of using ketamine that are both practical and cost-effective. Currently most ketamine therapy is given intravenously in specialised clinics at considerable expense, but the author has successfully treated patients with low-dose sublingual ketamine and his patients have been able to safely take this at home. Profits from the sales of this book will assist further research into the use of ketamine for the treatment of depression.

Religion is an evolutionary puzzle. It involves beliefs in counterfactual worlds and engagement in costly rituals. Yet religion is widespread across all human cultures and eras. This begs the question, why are so many people attracted to religion? In *The Attraction of Religion*, essays by leading scholars in evolutionary psychology, anthropology, and religious studies demonstrate how religion may be related to evolutionary adaptations because religious commitments involve fitness-enhancing behaviours that promote reproduction, kinship, and social solidarity. Could it be that religion is wide-spread, at least in the modern world, because it helps to facilitate cooperative breeding? International contributors explore the philosophical and theoretical arguments for and against the use of costly signalling, sexual selection, and related theories to explain religion, and empirical findings that support or disconfirm such claims. The first book-length treatment that focuses specifically on costly signalling, sexual selection, and related evolutionary theories to explain religion, *The Attraction of Religion* will be an important contribution to the field and will be of interest to researchers in the fields of evolutionary psychology, religion and science, the psychology of religion, and anthropology of religion.
