A whopping 145 essays will not only trigger but also boost your analytical and critical thinking abilities tremendously. This way you start working on your answers before the actual test day. Besides, owning this power-packed book gives you value for your money.

This book opens with Angelika Kratzer and Luigi Rizzi talking about contemporary issues, such as non-recursiveness of focus and the semantics of topics. The chapters climb down the spine from the left periphery to DP: the value of subjunctive across the history of German, expressive expressions in Brazilian Portuguese, left and right dislocation and the speaker's perspective in Italian, Brazilian double subjects and left dislocated topic, long versus short wh-movement in Brazilian Portuguese and Quebec French, low adverbs and the raising of the verb in Brazilian Portuguese, ellipsis and null objects in Brazilian and European Portuguese, and bare singulars in Brazilian Portuguese. The chapters propose original accounts for language variation and historical changes, most of them focusing on Brazilian Portuguese, a challenge to syntax and semantics. Thus, the volume contributes to Brazilian and Portuguese Linguistics, as well as to general and contemporary research on syntax and semantics of natural languages.

The first philosophy of language textbook on the market to cater to both linguists and philosophers.

This book contains selected papers prepared for the NATO Advanced Study Institute on "Unsteady Combustion", which was held in Praia da Granja, Portugal, 6-17 September 1993. Approximately 100 delegates from 14 countries attended. The Institute was the most recent in a series beginning with "Instrumentation for Combustion and Flow in Engines", held in Vimeiro, Portugal 1987 and followed by "Combusting Flow Diagnostics" conducted in Montechoro, Portugal in 1990. Together, these three Institutes have covered a wide range of experimental and theoretical topics arising in the research and development of combustion systems with particular emphasis on gas-turbine combustors and internal combustion engines. The emphasis has evolved roughly from instrumentation and experimental techniques to the mixture of experiment, theory and computational work covered in the present volume. As the title of this book implies, the chief aim of this Institute was to provide a broad sampling of problems arising with time-dependent behaviour in combustors. In fact, of course, that intention encompasses practically all possibilities, for "steady" combustion hardly exists if one looks sufficiently closely at the processes in a combustion chamber. The point really is that, apart from the excellent paper by Bahr (Chapter 10) discussing the technology of combustors for aircraft gas turbines, little attention is directed to matters of steady performance. The volume is divided into three parts devoted to the subjects of combustion-induced oscillations; combustion in internal combustion engines; and experimental techniques and modelling.
