Digital signal processing is the use of digital processing, such as by computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The digital signals processed in this manner are a sequence of numbers that represent samples of a

2. Digital Filtering in Technical Analysis. Digital filtering is widely used in electrical engineering, telecommunications, and other fields to process digital signals, e.g., to alter the features of the input signal in a particular way, which appears in the filter output.

A discrete sequence $x[n]$ is a sequence of numbers $\dots; x[2]; x[1]; x[0]; x[-1]; x[-2]; \dots$ where $x[n]$ denotes the n -th number in the sequence ($n \in \mathbb{Z}$). A discrete sequence maps integer numbers onto real (or complex) numbers. We normally abbreviate $x[n]$ to $x[n]$, or to $x[n]$ if the running index is not obvious. The notation is not well standardized.
