What happens if I drop an ant? What books are bad for you? What percentage of the world's water is contained in a cow? The Oxbridge undergraduate interviews are infamous for their unique ways of assessing candidates, and from these peculiar enquiries, professors can tell just how smart you really are. John Farndon has collected together 75 of the most intriguing questions taken from actual admission interviews and gives full answers to each, taking the reader through the fascinating histories, philosophies, sciences and arts that underlie each problem. This is a book for everyone who likes to think they're clever, or who thinks they'd like to be clever. And cleverness is not just knowing stuff, it's how laterally, deeply and interestingly you can bend your brain. Guesstimating the population of Croydon, for example, opens a chain of thought from which you can predict the strength of a nuclear bomb ...and that's just the start of it.

Explore "the twisting paths your mind can take when really made to think. From philosophy to physics and literature to logarithms"--P. [4] of cover.

The sequel to the 50,000+ copy-selling "Do You Think You're Clever?" featuring even more brain-melting Oxbridge interview questions."

From the ever-curious mind that brought you the bestselling *Do You Think You're Clever?* comes a brand-new trip to the far reaches of the intellectual universe, courtesy of even more notoriously provocative Oxbridge interview questions. How would you poison someone without the police finding out? (Medicine, Cambridge) What makes a strong woman? (Theology, Oxford) Instead of politicians, why don't we let the managers of IKEA run the country? (Social and Political Sciences, Cambridge) How do you organise a successful revolution? (History, Oxford) Whether you're interested in going to Oxbridge or just want to give your brain a workout, join polymath John Farndon on another exhilarating journey through the twists and turns of thought, and explore just what it means to be genuinely clever – rather than just smart.

Explains how self-delusion is part of a person's psychological defense system, identifying common misconceptions people have on topics such as caffeine withdrawal, hindsight, and brand loyalty.

Edge.org presents brilliant, accessible, cutting-edge ideas to improve our decision-making skills and improve our cognitive toolkits, with contributions by Nassim Nicholas Taleb, Richard Dawkins, Brian Eno, Steven Pinker, and more. Featuring a foreword by New York Times columnist David Brooks and edited by John Brockman, *This Will Make You Smarter* presents some of the best wisdom from today's leading thinkers—to make better thinkers out of the leaders of tomorrow.

A fun and informative guide to some of the more obscure, curious and tricky words in the English language.

A revelatory and timely look at how technology boosts our cognitive abilities—making us smarter, more productive, and more creative than ever. It's undeniable—technology is changing the way we think. But is it for the better? Amid a chorus of doomsayers, Clive Thompson delivers a resounding “yes.” In *Smarter Than You Think*, Thompson shows that every technological innovation—from the written word to the printing press to the telegraph—has provoked the very same anxieties that plague us today. We panic that life will never be the same, that our attentions are eroding, that culture is being trivialized. But, as in the past, we adapt—learning to use the new and retaining what is good of the old. *Smarter Than You Think* embraces and extols this transformation, presenting an exciting vision of the present and the future.

So You Think You're Smart is an eclectic collection of word games, riddles and logic puzzles to tantalize, tease and boggle the brains of readers of all ages and educational levels. The brain teasers are about ordinary words and things that everybody knows about so only common sense and a bit of resourcefulness are needed to solve them. The book is in its 17th printing and has appeared on Saturday Night Live.

A relatable, interactive, and funny exploration of algorithms, those essential building blocks of computer science—and of everyday life—from the author of the wildly popular *Bad Arguments Algorithms*—processes that are made up of unambiguous steps and do something useful—make up the very foundations of computer science. But they also inform our choices in approaching everyday tasks, from managing a pile of clothes fresh out of the dryer to deciding what music to listen to. With *Bad Choices*, Ali Almosawi presents twelve scenes from everyday life that help demonstrate and demystify the fundamental algorithms that drive computer science, bringing these seemingly elusive concepts into the understandable realms of the everyday. Readers will discover how:

- Matching socks can teach you about search and hash tables
- Planning trips to the store can demonstrate the value of stacks
- Deciding what music to listen to shows why link analysis is all-important
- Crafting a succinct Tweet draws on ideas from compression
- Making your way through a grocery list helps explain priority queues and traversing graphs
- And more

As you better understand algorithms, you'll also discover what makes a method faster and more efficient, helping you become a more nimble, creative problem-solver, ready to face new challenges. *Bad Choices* will open the world of algorithms to all readers, making this a perennial go-to for fans of quirky, accessible science books.
