But how do these important forces work, and how are electricity and magnetism related? Readers will find out the answer as they explore both concepts in detail. They will also learn how both magnetism and electricity have been used to create useful tools, and conduct experiments to see these forces in action first-hand.

Magnets can make Electricity. A magnetic field pulls and pushes electrons in some objects near them to make them move. For example, in copper metal electrons those are freely movable. When a magnet is swiped along quickly through a copper wire, electrons move and so electricity is made.
