" We need our neighbors and community to stay healthy, produce jobs, raise our children, and care for those on the margin. Institutions and professional services have reached their limit of their ability to help us. The consumer society tells us that we are insufficient and that we must purchase what we need from specialists and systems outside the community. We have become consumers and clients, not citizens and neighbors. John McKnight and Peter Block show that we have the capacity to find real and sustainable satisfaction right in our neighborhood and community. This book reports on voluntary, self-organizing structures that focus on gifts and value hospitality, the welcoming of strangers. It shows how to reweave our social fabric, especially in our neighborhoods. In this way we collectively have enough to create a future that works for all. "

This book describes communities that first built on their own assets, before seeking assistance from outside. What are the common factors that help all these communities mobilize? Do outside organizations have a role to play? It is aimed at community workers, researchers and policy makers who want to take a fresh look at community development.

Finally, a book that offers a practical yet well-researched guide for practitioners seeking to hone the way they show up in citizen space. At a time when public trust in institutions is at its lowest, expectations of those institutions to make people well, knowledgeable, and secure are rapidly increasing. These expectations are unrealistic, causing disenchantment and disengagement among citizens and increasing levels of burnout among many professionals. Rekindling Democracy is not just a practical guide; it goes further in setting out a manifesto for a more equitable social contract to address these issues. Rekindling Democracy argues convincingly that industrialized countries are suffering through a democratic inversion, where the doctor is assumed to be the primary producer of health, the teacher of education, the police officer of safety, and the politician of democracy. Through just the right blend of storytelling, research, and original ideas, Russell argues instead that in a functioning democracy the role of the professionals ought to be defined as that which happens after the important work of citizens is done. The primary role of the twenty-first-century practitioner therefore is not a deliverer of top-down services, but a precipitator of more active citizenship and community building.

Providing concrete examples for citizens and government officials, Diers describes a successful program to support community self-help projects and a community-driven planning process that involved 30,000 people.

Community Development for Social Change provides a comprehensive introduction to the theory and practice of community development and associated activities, discusses best practice from global experience and links that to the UK context. The book integrates the realities of practice to key underpinning theories, human rights, values and a commitment to promoting social justice. A range of practice models are described and analysed, including UK models, popular education and community organising, as well as a range of practice issues that need to be understood by community development workers. For example, strategies to promote individual and community empowerment, challenging discrimination, building and sustaining groups, and critical reflection on practice. Finally, a range of case studies from the UK and overseas illustrates good practice in diverse contexts. These case studies are analysed with reference to the values of community development, the promotion of social justice and the underpinning theories. It is an essential text for those on community development courses as well as for a range of workers, including local government, national and local voluntary agencies, and community-based organisations.

A comprehensive approach focused on sustainable change Asset Building and Community Development, Fourth Edition examines the promise and limits of community development by showing students and practitioners how asset-based developments can improve the sustainability and quality of life. Authors Gary Paul Green and Anna Haines provide an engaging, thought-provoking, and comprehensive approach to asset building by focusing on the role of different forms of community capital in the development process. Updated throughout, this edition explores how communities are building on their key assets–physical, human, social, financial, environmental, political, and cultural capital–to generate positive change. With a focus on community outcomes, the authors illustrate how development controlled by community-based organizations provides a better match between assets and the needs of the community.

Collective Impact is intended to help community leaders effectively engage participants in strategic planning initiatives and achieve desired results. It is a logical extension of, and builds on, earlier efforts that experienced difficulties helping groups implement actions identified in the planning processes. This book examines successful practices that apply Collective Impact principles to a variety of community development issues including reducing poverty, and similar topics. Contributing authors also examine techniques used in working with local groups to facilitate effective changes in their communities. The discussions focus on settings in which Collective Impact efforts are likely to succeed using a variety of case studies that vary by intent, purpose, and location. Discussions of involvement by community and campus partnerships, regional planning organizations, and other groups can affect the ways in which Collective Impact principles are applied and how well they work. The discussions conclude with transformational changes within Collective Impact, moving from the individual to the system and future directions for Collective Impact approaches. Practitioners and scholars alike will find the discussions of various approaches and outcomes using Collective Impact useful in designing future efforts to bring about community change. This book was originally published as a special issue of the journal Community Development.
