Holt Algebra 1 Answer Key - factoring polynomials

Correct answer: $\frac{x+3}{2x}$ Explanation: By factoring both the numerator and the denominator we get the following: $\frac{\left(x+1 \right) \left(x+3 \right)}{\left(x+1 \right) \left(2x \right)}$

Online Library Holt Algebra 1 Factoring Polynomials Answers Practice

$\frac{(x-1)(x+3)}{(x+1)(x-1)^2x}$ If we simplify we get:
 $\frac{x+3}{2x}$

Polynomials - Algebra-Class.com

The first method for factoring polynomials will be factoring out the greatest common factor. When factoring in general this will also be the first thing that we should try as it will often simplify the problem. To use this method all that we do is look at all the terms and determine if there is a factor that is in common to all the terms. If there is, we will factor it out of the polynomial.

Factoring polynomials is the inverse process of multiplying polynomials. After factoring a

Online Library Holt Algebra 1 Factoring Polynomials Answers Practice

polynomial, if we divide the polynomial with the factors then the remainder will be zero. Whenever we factor a polynomial we should always look for the greatest common factor (GCF) then we determine if the resulting polynomial factor can be factored again. Here are the most common factoring techniques used with polynomials:
