~~HTC Touch Diamond review | TechRadar~~

The HTC Touch Diamond, also known as the HTC P3700 or its codename the HTC Diamond, is a Windows Mobile 6.1-powered Pocket PC designed and manufactured by HTC. It is the first device to feature TouchFLO 3D - a new version of the TouchFLO interface, unique to the Touch family. The HTC Touch Diamond was first available in Hong Kong in late May 2008. It was available across all major European carriers in June 2008, and later in the year in other parts of the world. The American Touch Diamond was la

~~HTC Touch Diamond - Wikipedia~~

The Touch Diamond 2 by HTC is a great phone with the quality and mobility of HTC company. It is my 3rd HTC phone. The only negative point of this purchase is that when I tried to upgrade it to Windows Mobile 6.5 at the HTC website, it was not available only to my phone because by the serial number, it was made for the India market and in that country the upgrade it is not available so far.

This book is written in a friendly, beginner's guide style with plenty of step-by-step instructions for installing, configuring, and using Magento to run your own e-commerce site. We will set up an example store in the book with enough information to adapt the instructions according to your needs. This book is for anyone who wants to create an online store using Magento. If you are a non-technical person and are discouraged by the complexity of this powerful e-commerce application, this book is ideal for you. This book would also suit someone with e-commerce knowledge but requires a guide to getting started with Magento.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Intelligent information and database systems are two closely related and well-established subfields of modern computer science. They focus on the integration of artificial intelligence and classic database technologies in order to create the class of next generation information systems. The major target of this new generation of systems is to provide end-users with intelligent behavior: simple and/or advanced learning, problem solving, uncertain and certain reasoning, self-organization, cooperation, etc. Such intelligent abilities are implemented in classic information systems to make them autonomous and user oriented, in particular when advanced problems of multimedia information and knowledge discovery, access, retrieval and manipulation are to be solved in the context of large, distributed and heterogeneous environments. It means that intelligent knowledge-based information and database systems are used to solve basic problems of large collections management, carry out knowledge discovery from large data collections, reason about information under uncertain conditions, support users in their formulation of complex queries etc. Topics discussed in this volume include but are not limited to the foundations and principles of data, information, and knowledge models, methodologies for intelligent information and database systems analysis, design, implementation, validation, maintenance and evolution.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

This book explores the interplay of the youth segment and the market environment. It employs a variety of research methodologies to analyze how young people in Hong Kong interact with various consumer socializing agents, including parents, peers, media celebrities, government publicities, media contents and advertisements. Published by City University of Hong Kong Press. 香港城市大學出版社出版。

Implement state-of-the-art Mobile TV networks with this comprehensive guide to the latest technologies and standards, including MediaFLO, ATSC Mobile DTV, and CMMB, the same technologies seeing large-scale rollouts today around the world. You not only gain deep insight into the maze of technologies, but also the principles of mobile content-what makes it work, how it's produced, repurposed and delivered securely, and how it integrates with mobile and Internet domains. Learn about the key enablers of a mobile TV service, like smartphones, chipsets, and mobile software. Gain access to a detailed look at the networks deployed worldwide with real-world case studies. The informative diagrams provide rich visualization of the new technologies, services, and revenue models. Gain understanding of how mobile TV can be made interactive and how it can be delivered seamlessly in multiple markets. Get insight into the growing capabilities of multimedia handsets and software which drives innovative applications. Author Amitabh Kumar begins with the basics of mobile multimedia and progresses to cover details of technologies, networks, and firmware for mobile TV services. Easy to follow, Implementing Mobile TV features a rich presentation that includes dozens of FAQs and "Quick Facts." This new edition is updated to reflect the quickly evolving world of Mobile TV, focusing on factors for success and providing understanding of:

Mobile Telecommunications in a High Speed World tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. Mobile Telecommunications in a High Speed World will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.
