Here's a simple test that can help you confirm, most of the time, whether or not the noise is coming from your manual transmission. Engage the parking brake, start the engine and let it idle. Set your transmission to Neutral and depress the clutch pedal.

Diagnosing Noise From a Manual Transmission - AxleAddict ...

That would be a pilot bearing, which also means clutch replacement. A manual transmission is only turning when the car is either in motion, or when the transmission is in Neutral and the clutch is engaged (your foot is off the pedal). So sounds that occur while the car is stationary and in gear are most likely associated with the clutch.

How To Troubleshoot a Car That Makes a Whining Noise When ...

Manual transmission leaks can be caused by: bad or worn-out seals or gaskets, a damaged case or component, or even loose bolts.

Diagnosing Symptoms of a Bad Manual Transmission ...

The way to diagnose transmission problems is to first take note of when the problem is present and under what conditions. If a manual transmission makes noises just when the clutch pedal is all the way up or engaged and a grinding or rattling noise is heard, the throw-out bearing for the clutch is bad.

Diagnosing Manual Transmission Problems | It Still Runs

I hear a light (very faint) whining noise from the transmission at 40MPH(My truck reads 44.5K miles as it sits). It was fine until 40K miles and it started this noise recently. I went to inspect the oil level and found out that Toyota in their infinite wisdom decided to not put a dip stick. Anyway, the oil level seems fine.

Manual transmission - bearing whining noise??! | Tacoma World

When you are driving a manual car, a whining sound means a completely different story. If it occurs when you press the clutch for gear shifting, the release bearing is likely to be damaged. It will be a pilot bearing if the sound starts when the car begins to move and you release the clutch. In both cases, replacing the clutch is the only fix.

7 Components To Examine If A Car Makes A Whining Noise ...

Gunning says leaks are also a common manual transmission problem. Leaks occur to the clutch components, including the master and slave cylinder and the hydraulic lines. "Drivers should be aware of fluid levels during routine fluid level checks," he says. Tips for driving a manual transmission

What are the Most Common Problems with Manual Transmission ...

Update: 7/23/2016: If anyone sees this now and wonders what the noise is, it's a faint whine in the upper gears. The problem turned out to be a failed front ...

Manual Transmission Whine - YouTube

Manual transmission are not silent, but it is not a whining sound, still it does change its pitch according to your car speed. You could hear it more pronounced on 1st gear and reverse. Some new cars do have whining sound in transmission and drive-shaft. I was amazed to hear (not loud) whining on new BMW 7-Series made around 2007 model year.

Is it normal for a manual transmission car to make a ...

If you hear a constant whining noise, accompanied by a slip in the gears as the transmission automatically shifts, it points to low transmission fluids. Without the proper fluid level, the pump has to push air through the transmission, which causes the noise and produces the hesitation or slippage.

How to Diagnose Transmission Noises | It Still Runs

One of the major reasons why your car may be making that whining noise is because there are transmission issues. The gears and other parts may be worn down over time, or the transmission fluid is either old or getting at a low level. These things are prone to cause a noisy car when you drive, especially whenever you speed up.

Does Your Car Make A Whining Noise When Accelerating ...

A bad torque converter can cause a whining sound when starting your vehicle. A good place to start would be to check the transmission fluid. You're going to want to check it for both color, and metal content. If you see any flecks of metal on there, it is probably going to need serviced.

Toyota Corolla: Whining Noise → Diagnosis | Drivetrain ...

Short video to demonstrate the audible differences of a throw out bearing vs internal transmission noise. The transmission on my 2004 Tundra was making a very...

MUSTANG Transmission BEARING WHINE NOISE 5spd NOISY TRANS ...

The transmission pump makes this sound as pressure increases with rotational speed. This occurs while stationary and increases as the vehicle accelerates. A clogged transmission filter creates a similar sound to a whining pump. If the vehicle is low on transmission fluid, it can also cause a whining sound, accompanied by gear shifting problems ...

What Makes an Automatic Transmission Whine?

Whining on manual transmission cars is not an uncommon thing. Even though, my XRS has a different transmission (6 speed, C60 box), I also get some whining at low speeds coasting in parking lots (yes, even when I press the clutch in, I get some whining). I had it checked by Toyota way back 4 - 5 years ago and they said it was normal.

Corolla Manual Transmission Whine | Toyota Nation Forum

In some cases, when bearing pre-load is near the limit of specification, this thermally induced pre-load change may cause damage to the bearings and result in a high-pitched noise from the transmission.

Fixing Subaru Transmission Noise - Import Car

Low Transmission Fluid: For both manual and automatic transmissions, the primary cause for whining when in gear is low transmission fluid. If the fluid is too low, then the internal components of the transmission are not lubricated properly. What you're hearing is actually friction between those parts, and it can lead to significant damage.
