Night And Low Light Photography

Low light photography is not necessarily just night photography, as many people assume. There could be different amounts of light coming from various sources and whatever is less than daytime light outside, I consider low-light. Indoors photography without much ambient light (as in many of our homes) as well as the light that is barely visible to our eyes at night, is also considered to be low-light.

Low Light Photography Tips

This guide begins with an explanation of the technical aspects that need to be considered, such as the best equipment to use for night and low-light photography, which films to choose, how to ensure correct exposure in tricky situations, and understanding natural and artificial light. Following a subject-by-subject format, the book then covers a range of different themes and lighting situations - from landscapes and portraits to buildings, funfairs and firework displays, to weather phenomena ...
