Investigation Answer Sheet prompts on the left. Marking an angle with a red dot or adding a statement (and indicating the parallel lines with arrows) has, in the past, steered students towards posing questions and making comments about angle properties. Often, they speculate about the size of other angles by measuring or 'by eye'.

Investigation Answer Sheet
distance apart and will never meet, no matter how far they are extended.

Perpendicular lines are lines that cross at a 90° angle. If we rotate a perpendicular line by 90° it would then become a parallel line, as long as the lines aren't touching.
