An operation is commutative if a change in the order of the numbers does not change the results. This means the numbers can be swapped. Numbers can be added in any order. For example: $4 + 5 = 5 + 4$ x + y = y + x. Numbers can be multiplied in any

order. For example: $5 \times 3 = 3 \times 5$ $a \times b = b \times a$. Numbers that are subtracted are NOT commutative. For example:
