~~Teach Yourself the Slide Rule—Contents~~

THE simple slide rule, consisting of two logarithmic scales drawn on strips of cardboard mentioned in Section 1 would, in actual practice, be inconvenient to use. Clearly the two scales should be linked together by some means, so that whilst they could be made to slide to and fro along one another, they would, when set, retain their positions and not fall apart.

~~Teach Yourself the Slide Rule—Section 03~~

The only way to become proficient with the slide rule is to understand its fundamental principles, and to work out simple exercises. When a practical problem

presents itself the relevant numbers should be written down; figures which cancel out completely should be eliminated, and simple factors should be combined mentally to reduce the slide rule operations to a minimum.

~~Teach Yourself the Slide Rule—Section 16~~

The slide rule in its modern form was first devised by Wingate in 1626, and the cursor was added by Mannheim in 1851. Degree of Accuracy. The only criticism we hear advanced against the slide rule is that results obtained with its aid are not always exact. Speaking now of the 10" C and D scales, errors should not much exceed 1 to .2%.

~~Teach Yourself the Slide Rule—Section 15~~

The reader will now understand our contention that the A and B scales are of little value in a slide rule equipped with a log-log scale. Example: Find the square root of 1.28 using (i) scales A and D; (ii) log-log scale. (i) Use X or the index lines of the slide to project 1.28A into scale D. The result appears to be a shade greater than 1.13.
