A vidicon is the most commonly used TV camera tube because its simplicity and based on the principle of photoconductivity. An optical image of the scene to be transmitted is focused by a lens assembly on the rectangular glass face-plate of the camera tube. The inner side of the glass face-plate has a transparent conductive coating on which is laid a very thin layer of photoconductive material layer of either selenium or anti-mony compounds.. The

A television system involves equipment located at the source of production, equipment located in the home of the viewer, and equipment used to convey the television signal from the producer to the viewer. The purpose of all of this equipment, as stated in the introduction to this article, is to extend the human senses of vision and hearing beyond their natural limits of physical distance.
