This first historical dictionary in English of the Indochina War provides the most comprehensive account to date of one of the most important conflicts of the twentieth century. Over 1,600 entries offer in-depth, expert coverage of the war in all its dimensions. Christopher Goscha adopts a path-breaking dual international and interdisciplinary approach. Thus readers will not only find information on politics and military campaigns; they will also discover the remarkable impact this war had on intellectual, social, cultural, economic, and artistic domains in France, Indochina, and elsewhere. Indeed, rather than limiting the dictionary to the French and their Vietnamese adversaries, Goscha explores the internationalization of this conflict from its beginning in September 1945 at Ba Dinh square in Hanoi to its end

around the Cold War conference table in Geneva in July 1954, also making it clear that a myriad of non-communist Vietnamese, Lao, and Cambodian nationalists were deeply involved in this war and its outcome. In addition to its 1,600 entries, the dictionary contains a succinct historical introduction, selected bibliography, maps, illustrations, and tables. A massive work of outstanding scholarly quality and lasting value, this is a reference tool that will be invaluable for researchers, students, and anyone else hoping to understand the complexity of this tragic conflict.

Since the German edition of this book, the topic of risk has experienced even greater attention, not only in the world of science but also in other fields, such as economics and politics. Therefore, many new publications have evolved. To keep with

the idea of an encyclopedia for the topic of risk, this book has been completely reworked. Not only are many updated examples included in chapter "Risks and disasters" but also new chapters have been introduced, such as the chapter "Indetermination and risk". This new chapter was developed since the question "Is it possible for risks to be completely eliminated, and if not why?" has become a major point of concern. Therefore, especially in this chapter, the focus of the book has - tended from a simple mathematical or engineering point of view to include much broader concepts. Here, not only aspects of system theory have to be considered, but also some general philosophical questions start to influence the considerations of the topic of risk. The main goal of this edition, however, is not only the extension and revision of the book, but also the translation into the

English language to allow more readers access to the ideas of the book. The author deeply hopes that the success the book made in the German edition continues and that readers experience a major gain from reading the book.

The book addresses all major aspects to be considered for the design and operation of aircrafts within the entire transportation chain. It provides the basic information about the legal environment, which defines the basic requirements for aircraft design and aircraft operation. The interactions between airport, air traffic management and the airlines are described. The market forecast methods and the aircraft development process are explained to understand the very complex and risky business of an aircraft manufacturer. The principles of flight physics as basis for aircraft design are

presented and linked to the operational and legal aspects of air transport including all environmental impacts. The book is written for graduate students as well as for engineers and experts, who are working in aerospace industry, at airports or in the domain of transport and logistics.

Innerhalb der USA gilt New Orleans seit jeher als die „unamerikanischste“ Stadt, als exotisch und anders, gar als „sozio-geographischer Unfall“. Hier überkreuzen sich nicht nur die Einflüsse verschiedener Kolonialkulturen, sondern auch die Routen des atlantischen Sklavenhandels und der asiatischen Arbeitsmigration und nicht zuletzt die ideellen wie materiellen Transferbewegungen zwischen den beiden Amerikas. Der vorliegende Band macht es sich zur Aufgabe, diese vielfältigen transarealen Zirkulationsprozesse zu analysieren und das Potential New

Orleans' zur paradigmatischen Metropole des Globalen Südens auszuloten. Im Fokus stehen verschiedene Formen der kulturellen Kreolisierung, wie sie sich in der Sprache, der Literatur, der Musik, aber auch in Alltagsphänomenen wie dem Karneval oder Computerspielen manifestieren. Within the USA, New Orleans has long been considered the 'un-American' city, seen as exotic and different, even as a 'socio-geographical accident'. It is a crossroads not only for the influences of different colonial cultures but also for the routes of the Atlantic slave trade and immigration of Asian workers, and not least for material and non-material transfer between the two Americas. This volume seeks to analyse these manifold transareal circulation processes and to explore New Orleans's potential as a paradigmatic metropolis of the Global South. The focus is on different

forms of creolisation as manifested in language, literature and music, but also in everyday phenomena such as Carnival or computer games.

This is the first comprehensive book on the European Hermes program. It tells the fascinating story of how Europe aimed for an independent manned spaceflight capability which was to complement US and Soviet/Russian space activities. In 1975, France decided to expand its plans for automated satellites for materials processing to include the development of a small 10 ton spaceplane to be launched on top of a future heavy-lifting Ariane rocket. This Hermes spaceplane would give Europe its own human spaceflight capability for shuttling crews between Earth and space stations. The European Space Agency backed the proposal. Unfortunately, after detailed studies, the

project was cancelled in 1993. If Hermes had been introduced into service, it could have become the preferred "space taxi" for ferrying crews to and from the International Space Station. But that opportunity was lost. This book provides the first look of the complete story of and reasons for the demise of this ambitious program. It also gives an account which pieces of Hermes survived and are active in the 2nd decade of the 21st century. This fascinating story will be a great read for space enthusiasts. But it will also serve as a comprehensive documentation of an important episode in the history of manned spaceflight.

Engineering by Ashford and Wright, has become a classic textbook in the education of airport engineers and transportation planners. Over the past twenty years, construction of new airports in the US has waned as construction abroad boomed. This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

Handbook of Microalgal Culture is truly a landmark publication, drawing on some 50 years of worldwide experience in microalgal mass culture. This important book comprises comprehensive reviews of the current available information on microalgal culture, written by 40

Contributing authors from around the globe. The book is divided into four parts, with Part I detailing biological and environmental aspects of microalgae with reference to microalgal biotechnology and Part II looking in depth at major theories and techniques of mass cultivation. Part III comprises chapters on the economic applications of microalgae, including coverage of industrial production, the use of microalgae in human and animal nutrition and in aquaculture, in nitrogen fixation, hydrogen and methane production, and in bioremediation of polluted water. Finally, Part IV looks at new frontiers and includes chapters on genetic engineering, microalgae as platforms for recombinant proteins, bioactive chemicals, heterotrophic production, microalgae as gene-delivery systems for expressing mosquito-cidal toxins and the

Handbook of Microalgal Culture is an
essential purchase for all phycologists and
also those researching aquatic
systems, aquaculture and plant sciences.
There is also much of great use
to researchers and those involved in
product formulation within pharmaceutical,
nutrition and food companies. Libraries in
all universities and research establishments
teaching and researching in chemistry,
biological and pharmaceutical sciences,
food sciences and nutrition, and
aquaculture will need copies of this book
on their shelves. Amos Richmond is at the
