biomedical engineers in medicine and healthcare. It provides a unique and important forum to secure a coordinated, multileveled global response to the need, demand and importance of creating and supporting strong academic and clinical teams of biomedical engineers and medical physicists for the benefit of human health.

th On behalf of the organizing committee of the 13 International Conference on Biomedical Engineering, I extend our warmest welcome to you. This series of conference began in 1983 and is jointly organized by the YLL School of Medicine and Faculty of Engineering of the National University of Singapore and the Biomedical Engineering Society (Singapore). First of all, I want to thank Mr Lim Chuan Poh, Chairman A*STAR who kindly agreed to be our Guest of Honour to give the Opening Address amidst

his busy schedule. I am delighted to report that the 13 ICBME has more than 600 participants from 40 countries. We have received very high quality papers and inevitably we had to turndown some papers. We have invited very prominent speakers and each one is an authority in their field of expertise. I am grateful to each one of them for setting aside their valuable time to participate in this conference. For the first time, the Biomedical Engineering Society (USA) will be sponsoring two symposia, ie “Drug Delivery Systems” and “Systems Biology and Computational Bioengineering”. I am thankful to Prof Tom Skalak for his leadership in this initiative. I would also like to acknowledge the contribution of Prof Takami Yamaguchi for organizing the NUS-Tohoku’s Global COE workshop within this conference. Thanks also to Prof Fritz Bodem for organizing the symposium, “Space Flight Bioengineering”. This

year's conference proceedings will be published by Springer as an IFMBE Proceedings Series.

The only source that focuses exclusively on engineering and technology, this important guide maps the dynamic and changing field of information sources published for engineers in recent years. Lord highlights basic perspectives, access tools, and English-language resources--directories, encyclopedias, yearbooks, dictionaries, databases, indexes, libraries, buyer's guides, Internet resources, and more. Substantial emphasis is placed on digital resources. The author also discusses how engineers and scientists use information, the culture and generation of scientific information, different types of engineering information, and the tools and resources you need to locate and access that material.

This book analyzes of the use of social engineering as a tool to hack random systems and target specific systems in several dimensions of society. It shows how social engineering techniques are employed well beyond what hackers do to penetrate computer systems. And it explains how organizations and individuals can socially engineer their culture to help minimize the impact of the activities of those who lie, cheat, deceive, and defraud. After reading this book, you'll be able to analyze how organizations work and the need for security to maintain operations and sustainability, and be able to identify, respond to and counter socially engineered threats to security.

Both versions cover all introductory IT concepts topics and are

appropriate for a full semester course, with or without a lab component. The comprehensive version offers more depth on business systems and societal issues. Designed to accommodate the computer competency needs of students from a broad spectrum of disciplines and interests, this best-selling text/supplements package provides an exceptionally well-illustrated overview of computing concepts and IT applications all in a format that allows instructors the flexibility to meet their courses' education objectives. It strikes a good balance between efficiency of presentation and content that holds students' interest and invites learning. Only topics critical to general information technology competency are covered in order to provide the breadth of topics necessary to the understanding that is applicable today and in the future.

Polymer-based compounds play an important role in modern medical applications. Among them, high-molecular-weight polymers modified by biomolecules can increase biological activity and improve their biocompatibility. The composite material formed by the biopolymers combined with other materials can improve the mechanical strength. These materials that can complement polymers include micron, sub-micron, and nano-scale materials. Their application covers the entire field of biomedicine.

The Biomed 2011 brought together academicians and practitioners in engineering and medicine in this ever progressing field.
